

MyungJin Ko (Ray)

Software Engineer

MyungJin Ko (Ray)

Software Engineer — Seoul, South Korea rayleighko2@gmail.com ·
linkedin.com/in/rayleighko · github.com/rayleighko

Summary

Software engineer who builds and operates what I ship. As a founder and tech lead, I designed, launched, and ran a multi-tenant SaaS in production — owning the incidents, fixes, and trade-offs that come after launch, not just the build. I adapt to whatever stack a problem needs (TypeScript, Rust, C#, Java) and work with an AI-native development approach. Currently deepening system design and software architecture toward a sharper technical specialty.

Skills

- **Fluent:** TypeScript, JavaScript, React, Next.js, Node.js, NestJS, PostgreSQL
 - **Worked with:** Rust, Java / Spring, C# / .NET (Revit), React Native, Python
 - **Data & search:** PostgreSQL, Supabase, Elasticsearch
 - **Infrastructure & tools:** AWS (EC2, RDS, Lambda), Vercel, Fly.io, Docker, NHN Cloud, CI/CD, pnpm monorepo (Turborepo), Sentry, PostHog
 - **Currently deepening:** system design & architecture, real-time systems, scalable infrastructure
 - **Approach:** AI-native development (harness engineering); 0 → 1 product development
-

Experience

Plancy — Co-founder & Tech Lead

Seoul · Apr 2021 – 2026

MICE All-in-One — B2B multi-tenant SaaS (mice.ai.kr) · Sole engineer · Feb 2024 – 2026

- Built and operated a white-label, multi-tenant SaaS for the MICE (events & exhibitions) industry as the sole engineer, from PoC to production — adopted by ~10 agency customers serving ~1,800 end users.

- Ran the service solo in production: triaged customer-reported issues, handled incidents, and worked a CS-driven backlog while shipping new features.
- Designed and unified three fragmented authentication flows (Supabase, service-level, and per-project) into a single user-centric system with per-project session isolation and a white-label admin auth flow.
- Built a drag-and-drop venue/booth layout editor on an HTML canvas (Konva) and a real-time business-matching feature (scheduling + live chat) on Supabase Realtime.
- Built the compute-heavy document-processing service in Rust (Axum), containerized with Docker and deployed serverless on Fly.io, separate from the Next.js API on Vercel.
- Implemented server-side PDF/Excel generation, scheduled/immediate invoice email, QR-based attendee check-in, and a Lexical rich-text editor.
- Set up error tracking (Sentry) and product analytics (PostHog) to monitor production and inform UX decisions.
- Structured the codebase as a pnpm monorepo (web + API) on Next.js 19 and TypeScript.
- Drove an AI-native development workflow (harness engineering; staged INIT → PLAN → BUILD → REFLECT) and led the team's move to AI-assisted operations.

Client Engineering (Outsourcing) · Tech Lead · Oct 2021 – Oct 2025

- Delivered software for enterprise clients (~40% of company revenue), adapting to each project's stack across frontend, backend, and infrastructure.
- Built a public-sector information-lookup system in Java / Spring Boot on a CSAP-certified cloud (NHN Cloud); designed PII encryption/decryption and traffic-based autoscaling so event-day spikes were absorbed automatically.
- Built a solar-design review platform integrating an Autodesk Revit add-in (C# / .NET): designed a custom file format (.pim — a ZIP of structured JSON), parsed it via Next.js APIs into Supabase Storage, and surfaced reports, charts, and national-standard compliance checks on the web.
- Delivered frontend (and some backend) for multiple early-stage startups.

The Cent Lab — Software Engineer (Co-founder)

Apr 2020 – Apr 2021

- Built and launched an AI-assisted personalized fragrance recommendation app (React Native / Expo) on iOS and Android.
- Designed a fragrance search & recommendation engine over a ~70K-item dataset (structured by scent notes — top/middle/base) using Elasticsearch with weighted scoring to surface similar fragrances (related-search style), combined with survey-based personalization.
- Introduced NestJS and led backend design and code review on AWS (EC2, RDS, Lambda).
- Co-filed a patent for the recommendation process; selected for the Korean Pre-Startup Package ().

Earlier Experience

- **Supaja — Frontend Engineer (Freelance), 2020** — Built web front end with Next.js / TypeScript.
- **Weplanet — Frontend Intern, 2019** — Rapid
