

MyungJin Ko (Ray)

Software Engineer — Seoul, South Korea rayleighko2@gmail.com · linkedin.com/in/rayleighko · github.com/rayleighko

Summary

Software engineer and former startup founder who builds and operates what I ship. As co-founder and tech lead, I designed, launched, and ran a multi-tenant SaaS in production — owning the incidents, fixes, and trade-offs that come after launch, not just the build. I set the team's development workflow, mentored engineers, and balanced technical and business decisions, adapting to whatever stack a problem needs (TypeScript, Rust, C#, Java) with an AI-native approach.

Skills

- **Fluent:** TypeScript, JavaScript, React, Next.js, Node.js, NestJS, PostgreSQL
- **Worked with:** Rust, Java / Spring, C# / .NET (Revit), React Native, Tauri (desktop), Python
- **Data & search:** PostgreSQL, Supabase, Elasticsearch
- **Infrastructure & tools:** AWS (EC2, RDS, Lambda), Vercel, Fly.io, Docker, NHN Cloud, CI/CD, pnpm monorepo (Turborepo), Sentry, PostHog
- **Practices:** real-time systems, multi-tenant SaaS, AI-native development (harness engineering), 0-to-1 product development

Experience

Plancy — Co-founder & Tech Lead

Seoul, South Korea · Apr 2021 – 2026

MICE All-in-One — B2B multi-tenant SaaS (mice.ai.kr) · Sole engineer · Feb 2024 – 2026

- Built and operated a white-label, multi-tenant SaaS for the MICE (events & exhibitions) industry as the sole engineer, from PoC to production — ~10 agency customers, ~1,800 end users — owning incidents, fixes, and a CS-driven backlog while shipping new features.
- Unified three fragmented authentication flows (Supabase, service-level, and per-project) into a single user-centric system with per-project session isolation and a white-label admin auth flow.
- Developed a drag-and-drop venue/booth layout editor on an HTML canvas (Konva) and a real-time business-matching feature (scheduling + live chat) on Supabase Realtime.
- Incrementally migrated a live product without a big-bang rewrite — moving only the traffic-spiky, compute-heavy endpoints from the Next.js API (Vercel) to a Rust (Axum) + Docker service on Fly.io for better latency under load — and extended the product to desktop via Tauri.
- Shipped tiered multi-tenant plans (free / pro / enterprise) with Toss Payments billing, and optimized large-table rendering with list virtualization (TanStack Virtual).
- Implemented server-side PDF/Excel generation, scheduled/immediate invoice email, QR-based check-in, and a Lexical rich-text editor; instrumented Sentry and PostHog for production monitoring.
- Structured the codebase as a pnpm monorepo (Next.js 19 + TypeScript) and drove an AI-native workflow with Claude Code (harness engineering), leading the team's move to AI-assisted operations.

Client Engineering (Outsourcing) · Tech Lead · Oct 2021 – Oct 2025

- Delivered software for enterprise clients (~40% of company revenue), adapting to each project's stack across frontend, backend, and infrastructure.
- Developed a public-sector information-lookup system in Java / Spring Boot on a CSAP-certified cloud (NHN Cloud); designed PII encryption/decryption and traffic-based autoscaling that absorbed event-day peaks of ~15K–20K daily active users automatically.
- Delivered a solar-design review platform integrating an Autodesk Revit add-in (C# / .NET): designed a custom file format (.pim — a ZIP of structured JSON), parsed it via Next.js APIs into Supabase Storage, and surfaced reports, charts, and national-standard compliance checks on the web.

The Cent Lab — Software Engineer (Co-founder)

Seoul, South Korea · Apr 2020 – Apr 2021

- Built and launched an AI-assisted personalized fragrance recommendation app (React Native / Expo) on iOS and Android.
- Designed a fragrance search & recommendation engine over a ~70K-item dataset (structured by scent notes — top/middle/base) using Elasticsearch with weighted scoring to surface similar fragrances (related-search style), combined with survey-based personalization.
- Introduced NestJS and mentored the backend developer through architecture decisions and code review, on AWS (EC2, RDS, Lambda).
- Co-filed a patent for the recommendation process; secured ~KRW 50M (about \$37K) in Korean government startup funding.

Earlier Experience

- **Supaja — Frontend Engineer (Freelance), 2020** — Built web front end with Next.js / TypeScript.
- **Weplanet — Frontend Intern, 2019** — Rapid prototyping across diverse client projects.

Education

B.S. in Computer Science (Software) — Sahmyook University, Seoul, South Korea · 2013 – 2021

Military Service

Republic of Korea Marine Corps — IT Operations Specialist · Sergeant, completed mandatory service · Feb 2014 – Nov 2015
